## Stay hydrated!

Adequate hydration is the basis of all metabolic processes in our body and vital for our health. Drinking sufficient water can be very easy, if the water tastes good. For ultimate safety, your BRITA Cube combines two powerful technologies: MAXTRA PRO filtration and innovative UV-C technology. The pure-tasting water from your BRITA Cube water dispenser makes it very easy to stay hydrated throughout the day.

## How to make the perfect cup of tea?

The European Speciality Tea Association\* recommends using filtered water for making tea and taking into account the different brewing temperatures and times required for the different types of tea. Ultimately, it is a matter of taste - just try your tea at different temperatures and find your personal favourite.

\*The European Speciality Tea Association (ESTA) is a not-profit membership organisation. Its mission is to create and inspire excellence in the speciality tea community through innovation, research, education and communication. As an English organisation, it has its roots in the land of tea drinkers and experts.

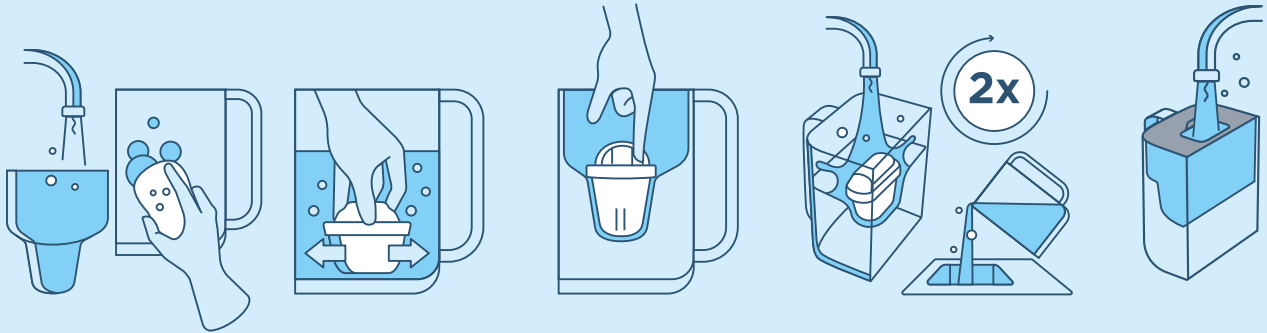

## The secret to good coffee

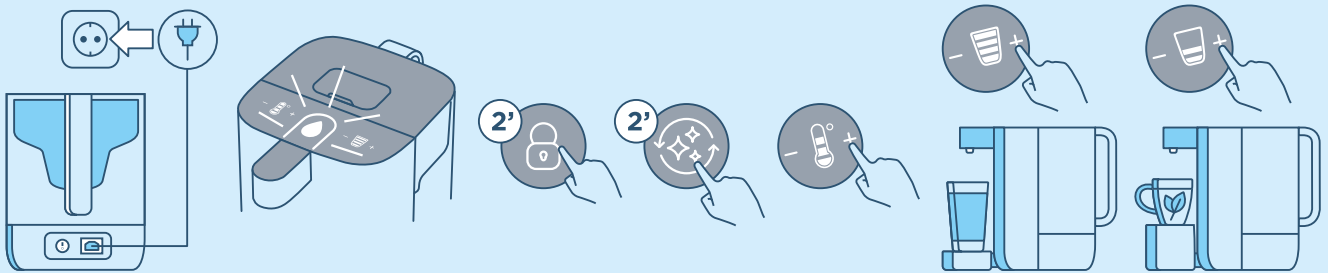

In addition to the coffee beans and the way the coffee is prepared, the water has a decisive influence on the flavour of the coffee. If the water is too hard, it reacts with the fine acids in the coffee and the coffee can taste unbalanced, bitter and bland, regardless of using best beans and carefully preparing. Therefore, always use filtered water to ensure a better tasting coffee.

# Quick Start Guide

**Step 1:** Clean the water tank and funnel, activate the MAXTRA PRO cartridge, fill the tank

**Step 2:** Plug in the power cable, activate and operate your BRITA Cube

**Step 3:** Get to know the symbols

## Cup Volume

150 ml

250 ml

350 ml

450 ml

## Temperature

ambient

45°

65°

85°

95°
